

# Basics of Concrete Repair and Structural Strengthening

## Paul Russell Product Manager – Concrete Repair and Structural Strengthening

The voice of the concrete repair and refurbishment industry

## Why Does Concrete Need Repairing ?

- Corrosion of reinforcement
- Insufficient reinforcement
- Chemical damage
- Excessive loads
- Structural damage
- Fire damage
- Seismic damage
- Blast damage

The voice of the concrete repair and refurbishment industry

# Defects

Low cover steel reinforcement where carbonation or chlorides have reached the reinforcement altering its passive nature

#### The voice of the concrete repair and refurbishment industry

# Defects

Which can create de-lamination of sections which will ultimately fail.

## BS EN 1504: A guide to concrete repair

- BRITISH STANDARD BS EN 1504 is the new European and British Standard for the protection and for the protection and repair of reinforced concrete. Befinitions, products and systems
- There are 10 PARTS to the standard covering TEST METHODS for material properties and SPECIFICATION for the KEY REPAIR MATERIALS, including coatings, mortars, bonding agents and injection materials.
- It also includes GENERAL PRINCIPLES for repair work and a standard for site application of products and Part 7: Reinforcement corrosion systems.

The voice of the concrete repair and refurbishment industry

# BS EN 1504

Parts	Title	
Part 1	Definitions	
Part 2	Surface protection systems for concrete	
Part 3	Structural and non-structural repair	
Part 4	Structural Bonding	
Part 5	Concrete Injection	
Part 6	Anchoring of reinforcing bars	
Part 7	Reinforcement corrosion protection	
Part 8	Quality control and evaluation of conformity	
Part 9	General principles for the use of products and systems	
Part 10	Site application of products and systems and quality control of the works	

The voice of the concrete repair and refurbishment industry

## **BS EN 1504 : A guide to concrete repair**

- The standards apply across the 25 member states of the EU as well as Switzerland, Norway, and Iceland.
- The BS EN1504 series represents an opportunity to further improve concrete repair practice in the continent and present a challenge to the industry as it adapts to the new standards.
- The standards must now be used by Specifiers, particularly those operating under public procurement rules.

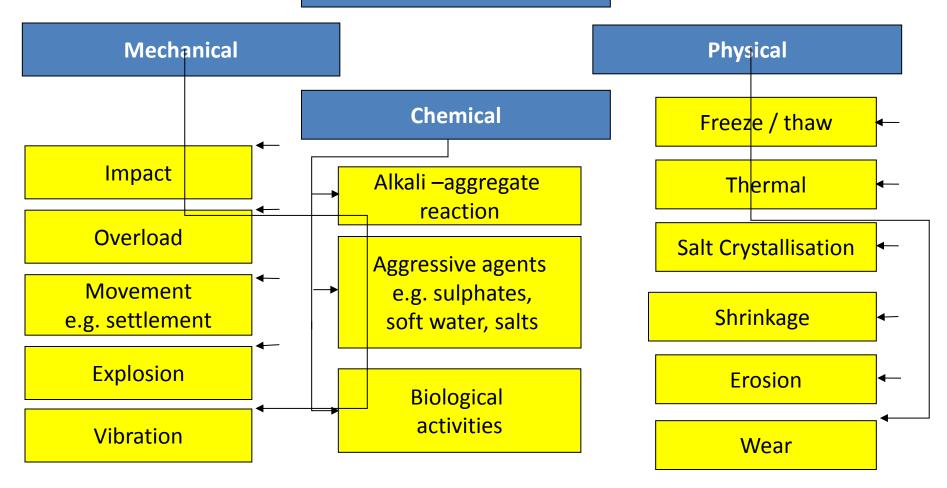

The voice of the concrete repair and refurbishment industry

## (Common causes of defects; EN 1504 Part 9 Figure 1)

#### **Defects in concrete**

#### The voice of the concrete repair and refurbishment industry

## **Specifying to BS EN 1504**

# Products and systems for the protection and repair of concrete structures

#### **1** Assess the damage

- Examine the original design approach
- Survey the present condition
- Consider the environment
- History of the structure

#### 2 Choose options

- Consider the intended use of the structure
- Design life of the structure
- Performance of systems
- Seek advise on the best options

The voice of the concrete repair and refurbishment industry

## Specifying to BS EN 1504 Products and systems for the protection and repair of concrete structures

3 Choose Repair Principal

Principle	BS EN 1504	Problem	BS 1504 reference
1	Protection against ingress	Concrete is a porous material and is exposed to aggressive chemicals or contaminated water.	
2	Moisture control	Excessive water penetration can cause damage to reinforced concrete.	MC
3	Concrete restoration	Restoring the original concrete after spalling and delamination.	CR
4	Structural strengthening	Increasing or restoring the structural load-bearing capacity after excessive loads or weakened structure.	SS
5	Increasing physical strength	Increasing physical resistance to impact damage, abrasion and wear and tear.	PR
6	Resistance to chemicals	Increasing resistance of concrete surface to chemical attack.	RC

7	Preserving or restoring passivity	Restoring the concrete to a highly alkaline condition to protect steel rebar.	RP
8	Increasing resistivity	Increasing the resistivity of the concrete to prevent rebar corrosion.	IR
9	Cathodic control	Preventing corrosion of rebar reinforcement	22
<mark>10</mark>	Cathodic protection	Reducing or preventing the corrosion reinforcement.	CP
11	Control of anodic areas	Creating conditions for the steel rebar not to be subject to corrosion.	

**4** Choose Correct Repair Methods

THIS IS WHERE THE ENGINEER HAS THE MOST IMPORTANT DECISIONS TO MAKE

The voice of the concrete repair and refurbishment industry

## **Specifying to BS EN 1504**

#### Products and systems for the protection and repair of concrete structures

**5** Choose materials

6 Choose correct specification

# Methods of monitoring for corrosion activity

STRUCTURAL

PROTECTION & REPAIR

CONCRETE

# Two main catalysts for corrosion

• Chloride ions (Cl-)

Chloride ions from salt (sodium chloride] break down the protective layer on the steel that was established by the alkalinity within the concrete.

Carbonation

This is caused through atmospheric carbon dioxide, an acid gas, that permeates through the pores and reacts with the alkalinity

The voice of the concrete repair and refurbishment industry

# **Testing for Chlorides**

- Normally by titration
- Laboratory tests
- Quantabs

The voice of the concrete repair and refurbishment industry

# Investigation Testing for Carbonation

PhenolphthaleinFresh fractures

The voice of the concrete repair and refurbishment industry

# Other investigative techniques

- Pull-off testing
- Covermeter
- Core drilling and testing
- Schmidt hammer
- Half cell potential
- Radiography
- Thermal imaging

Concrete Preparation

• Repair Mortars

Protective Coatings

The voice of the concrete repair and refurbishment industry

# Preparation

## **Concrete** - Cleaning

Remove contamination, cement laitance, coating etc

- Low pressure water jetting
- High pressure water jetting
- Grit blasting
- Steam cleaning
- Needle gunning
- Scabbling
- Flame spalling

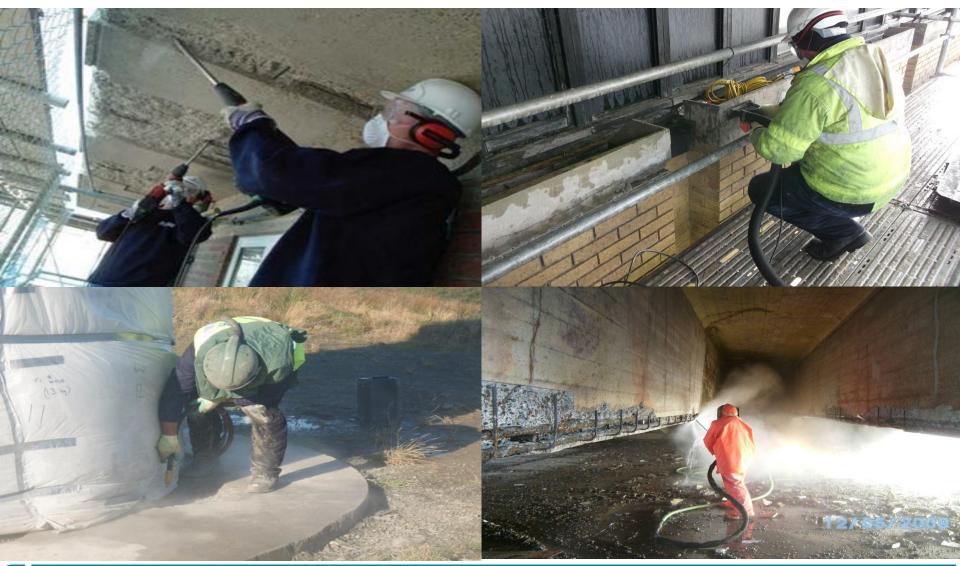

The voice of the concrete repair and refurbishment industry

## Methods of Removing defective concrete

The voice of the concrete repair and refurbishment industry The Structural Concrete Alliance brings together the expertise of:

cpa

#### **Steel – Preparation**

# Preparation

- Remove contaminated concrete
  50mm beyond visible corrosion
- Grit Blast to achieve first quality to BS 7079 : Part A1 (equivalent to Swedish Standard SA 2½ quality, dull grey metal, devoid of any corrosive products)
- Add additional reinforcement where required

The voice of the concrete repair and refurbishment industry

# **Methods of Application**

- Hand applied patching mortars
- Fluid micro concrete
- Spray applied concretes

The voice of the concrete repair and refurbishment industry The Structural Concrete Alliance brings together the expertise of:

cpa

# Hand Applied Repairs

- Polymer Modified Mortars
- Repair depths to 10 75mm
- Typical size <0.5m<sup>2</sup> on vertical faces
- Typical size 400 x 400mm by 50mm deep on soffits
- Manual Placement
- Large numbers small in size

The voice of the concrete repair and refurbishment industry

# Hand Applied Repairs

Pre-dampen the substrate

Apply primer to steel & concrete

## Designing with FRP

- Qualify substrate
- Requirements:
- Concrete: 20N/mm2 minimum
- Tensile bond test:
- 1 Nmm2 minimum
- Failure within host concrete
- Steel- 15Nmm2 minimum

The voice of the concrete repair and refurbishment industry

### **FRP** Adhesives

### **Epoxy Adhesives**

- Primer
- Epoxy paste or leveling coat
- Adhesive Saturant, wet lay-up system.
- Adhesive Saturant, dry lay-up system.

## **Key benefits of Composites**

- Lower weight
- Fast and lower cost installation
- Reduced life cycle maintenance costs
- Minimal business interruption
- Increased refurbishment opportunities
  - To extend existing asset life

The voice of the concrete repair and refurbishment industry

# Summary

- Composites are viable means of strengthening existing structures
- ✓ Proven performance since 1950's
- ✓ High strength-to-weight ratio
- $\checkmark$  Easy of installation
- ✓ Versatile
- ✓ Minimal limitations
- ✓ Wide array of fabric geometries to meet specific project needs
- ✓ Design guideline (TR55) to assist engineers
